

Hydrometric Consulting Services

Specialists in water measurement and instrumentation

Who we are

Established in 2000, Hydrometric Consulting Services (HCS) offers extensive experience in environmental monitoring.

Our staff are specialists in:

- Instrument systems that measure all parameters associated with environmental monitoring; and
- Designing, installing and operating environmental monitoring stations

The Directors of HCS bring together over 50 years of knowledge and experience in the hydrometric field. We offer an independent and unbiased range of specialist capabilities.

HCS has vast experience in the water industry and offers total solutions to client needs. We have a large range of industry contacts and offer a quality service at a very competitive price.

Key Services

- Hydraulic and hydrometric consultancy
- Data collection
- Data management
- Flow measurement in open channels and pipes
- Hydrometric data audits
- Hydrometric field audits
- Site selection consultancy
- Monitoring site design, manufacture, installation and operation
- Instrument supply, installation and site commissioning
- Instrument testing and calibration including tipping bucket rain gauges, rain sentries and flow meters
- Instrumentation and asset management
- Maintenance services
- Sample collection
- Technical report writing for specifications and contracts
- Training packages
- Project management

Hydrometric Consulting Services

Specialists in water measurement and instrumentation

Calibration

Are you sure that the instruments taking your valuable measurements are accurately calibrated and operating within manufacturer's specifications?

HCS will ensure that you have the confidence in your measurements by providing a calibration service for your instrument systems. We are specialists in the calibration of:

LEVEL sensors for water management applications, including ultrasonic level systems, hydrostatic sensors and gas bubblers

PRESSURE transmitters and transducers for pipe, reservoir, tank and water level measurement

FLOW meters in open channels and pipes for water, sewage and trade waste applications

WEIRS & FLUMES in man made and natural channels

RAINFALL gauges and rain sentries on flood warning, data collection systems and trade waste applications

WATER QUALITY sensors in streams, reservoirs and treatment plants

METEOROLOGICAL sensors for automatic weather stations

What sets us apart

TECHNOLOGY

HCS provides hydrometric and calibration services using the latest up-to-date equipment and techniques.

INNOVATION

HCS embraces a continual improvement process that ensures the latest technology and methods are employed for each project.

CONSISTENCY

HCS has a Quality System compliant with AS/NZS ISO 9001: 2000 Quality Management System which ensures we deliver consistency in every service we undertake.

PERSONALISED SERVICE

HCS offers all clients a personalised service— ensuring that you have one contact from project initiation to project completion.
